

Shared Web Hosting Service: Factors That Matter

If you are interested in starting a business online, and you are very serious with this issue then I would like to remind you before hand that there are a lot of things that you have to study before you can rightfully expect a high return on the investment you are going to make. And for that you need to make sure that your company website has a user friendly interface.

Surf net and you will come across arrays of choices to make when it comes to selecting the best type of web hosting for your particular needs that is a significant part of your plans if you want your website to have its own niche in the Internet. And among the several webs hosting services “shared web hosting” is by far the most popular type of web hosting, and are ideal and economical options for most websites to keep overhead cost minimum.

The concept of shared web hosting differs according to the needs and necessity and ability to afford the cost involved. Let us look at the different factors that really matters when looking for a web hoisting services.

1. Technical Support: while choosing a host make sure that they offer live chat, ticket based or email based support and support 24x7 in your language. They should also have a toll free number and able support representatives.
2. Hosting Features: It should be manageable for your website and scripts to function properly. Check the offered control panels and try a demo to make sure you are comfortable with it. Also monitor the web stats. Count the number of FTP, email, databases, sub domains, parked and add-on domains they offer.
3. Disk Space: Offering high disk space is not important but it is important to offer enough disk space. You can easily upgrade if/when required with most hosts.
4. Monthly Bandwidth: Usage of 100GB per month is considered good which means lots and lots of visitors and offer for more bandwidth than that can be a marketing trick.
5. Server Performance: Check the confinements of the server they are putting you on. Check the capacity of RAM, CPU power, number of accounts on a single box, server location and guaranteed uptime that should be in the 99.99% figure.
6. Monthly Price: A real cheap monthly price does not essentially mean bad so look for a mix of features within affordable price and go for a long term to reduce the cost. You can even look for some money saving coupons on net.
7. Ratings & Reviews: Check different forums and communities, popular blogs to find out the reputation of the different hosts that you have already short listed to make your decision effective.

So all these above mentioned factors that do really matters in making a really good shared web hosting deal.
